

## HARDWOOD CLIP VS

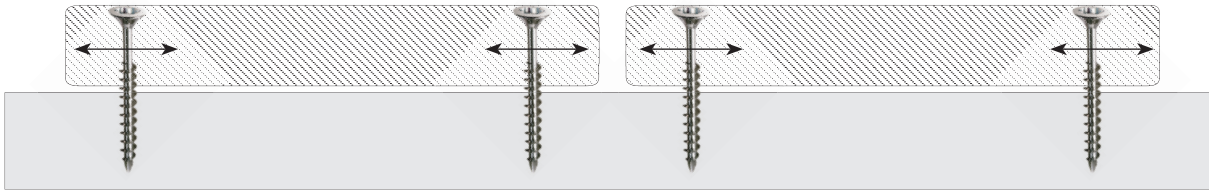

Boards are screwed down onto joists – Automatic board spacing during installation – Automatic control of spacing variations between boards made of AD and KD wood

Even board spacing during installation and over time. Boards expand and contract freely with no risk of abnormally large gaps or having boards abut against each other.

## TRADITION INSTALLATION

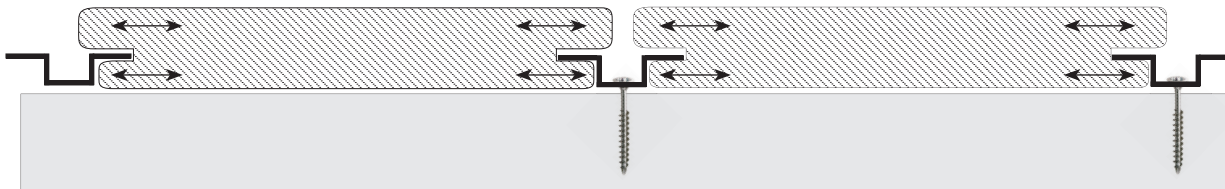

Boards are screwed down onto joists – Installer controls board spacing during installation – Control of spacing variations between boards made of AD and KD wood depending on the installer's workmanship

Uneven board spacing during and after installation, wood tension during expansion and contraction

## OTHER HIDDEN SYSTEMS

Boards are not screwed down onto joists – Automatic spacing between boards during installation

Board heaving and shifting. Partial or total derailing of fasteners outside the groove. Lack of deck board sturdiness.

No control of board spacing during periods of expansion and contraction. Abnormally large gaps or boards that abut against each other.

Uneven board spacing during and after installation
